

6" & 8" RING Gate Latch:

NOTE: on 6" Twisted & Plain Ring Gate Latches, keep slot and catch plate will be offset.

1. Drill a 1/2" hole in required position for the spindle (The spindle should be located such that allows the latch to overlap on to the door/gate frame by 1 1/2" to 2"). Insert spindle into hole.
2. Install the ring gate handles on either side of the door/gate and secure mounting plates with screws provided (NOTE: Spindle included will accommodate up to a 4" door/gate. Smaller door/gate will require the spindle to be cut down.)
3. Slide the keep at least 2" along latch or until it is entirely on the door/gate ensuring that latch is level when resting on bottom of keep slot. Fasten with screws provided.
4. Position and fasten catch plate to door/gate frame ensuring that the latch rests securely in hook.

Directions are for guidance only. Requirements may vary due to individual circumstances. We recommend drilling smaller pilot holes before screwing to reduce the chance of splitting wood, and when going completely through wood products, drill from both sides.
